

Combination Layouts

Introduction

The file layouts in this section are to be used by a Combination EDEExpress/Institution System to:

1. Import data from another institutional system into the EDEExpress database to create loan origination records (DIEA02OP) or make changes to loan origination records (DIEC02OP); or
2. Export useful data from the EDEExpress system to be used by other institutional systems such as disbursement and loan origination data. The user may use file formats and user-defined queries from within EDEExpress to select the desired fields and specific records for exporting. See the online Help in EDEExpress for details on how to create queries and file formats.

Because each institutional system has unique requirements for importing data files, the export files created by EDEExpress for use by external systems are created without header or trailer records attached. If needed, the appropriate header or trailer records must be created by your institutional system upon import. Also, these export files are created in ASCII format and the end of each record is delineated or marked with carriage return/line feed characters (ASCII 10 and 13). There is no end of file marker (EOF), only the final carriage return/line feed marker after the last record.

Similarly, EDEExpress receives data from external systems without a header and trailer record but does require an ASCII format with the end of each record marked with carriage return/line feed characters (ASCII 10 and 13). Again, there is no end of file marker (EOF); only the final carriage return/line feed marker after the last record.

Note: If the file is incorrectly formatted without the carriage return/line feed, the import fails and the following error message displays: *invalid record length*. (You are given the record size of the import file.)

External Import Change Record

The table below is a description of the External Import Change Record. This table represents the layout of the record that imports into EDEExpress from external sources to change data on an origination record. A table listing the Import Change Table Values for the Change Field Transmit Numbers follows this record layout.

External Loan Data

You may define your own file layouts and queries from within EDEExpress to select the desired fields and specific records for exporting.

Files exported out of EDEExpress using File Formats can be either standard fixed-length files or a field with each field separated by a delimiter. When exporting a file, if you choose fixed-length, the system exports the file in a standard layout, with each field exported into a specific field position within the layout. If you choose comma, tab, or custom delimiter, the software exports the file with each field separated by the chosen delimiter. Some systems may find it easier to import the file with a selected delimiter, rather than using a fixed-length layout for all exports.

The following layout is a sample if “All Fields” are selected when creating a file format (layout). The file layouts are applied by selecting a file format code when you select an Export type of “Disbursement External,” “Origination External,” or “Origination External” (PLUS only). In these cases the file names are the same (DEER02IN). To narrow or select a specific set of records, you may also use a query in combination with the user defined file layout.

The export process pulls the records from the associated database and resets the Export to External flag to “N” to indicate these records have been exported for use in an external system.
